

Investment Strategy

The Conservative Growth Index Program (CGIP) is an options income strategy designed for consistent positive annual returns while minimizing risk. It involves selling weekly S&P 500 futures put options with less than 1 delta exposure, translating to less than a 1% chance of the position reaching the strike price and aims to exit positions before expiration at a predetermined profit target. To manage risk, CBCM may buy back options before expiration if stop loss levels are breached. The program focuses on high liquidity markets, specifically S&P 500 e-mini futures options contracts.
